

BPW improves driving comfort and sensitive handling of the cargo!

From 1 September 2008 onwards, the shock absorber 02.3702.70.00 will be replaced by the shock absorber 02.3722.89.00 in OEM equipment from BPW. Furthermore, starting from 29 September 2008 onwards, the shock absorber 02.3702.92.00 will be replaced by the shock absorber 02.3722.88.00.

Ongoing technical development of tried-and-tested BPW shock absorbers has made it possible to offer additional benefits for customers.

The optimised shock absorbers 02.3722.89.00 or 02.3722.88.00

- will be further improved by a technically optimised characteristic and even better response in terms of damping properties,
- have a protective tube with a reduced diameter from 82 mm to 75 mm (lower tube 72 mm to 65 mm) and therefore optimise the installation volume,
- are approx. 1 kg lighter per axle and
- have installation lengths and connection dimensions (bushes) that are identical to the 02.3702.70.00 or 02.3702.92.00, which means they are completely interchangeable for those units.

☞ Note that the units on each axle should be replaced as a set (2 identical dampers per axle). However, it is permitted to have different units on individual axles within the vehicle. The shock absorbers 02.3702.70.00 and 02.3702.92.00 will continue to be available as spare parts.

Old	New	Date of Conversion
02.3702.70.00	02.3722.89.00	01.09.2008
02.3702.92.00	02.3722.88.00	29.09.2008
