

The warranty for all cases. Green light from the Atlantic to the Ural mountains.

Our popular ECO Plus warranty has now been available for 10 years. For on-road use, for instance, it gives our customers five years warranty without mileage restriction on the renowned BPW quality of the complete ECO Plus air suspension chassis system; a system which offers maximum reliability in daily use.

Thanks to technical optimisation of our air suspension, we have been able to improve and simplify our tried and - trusted ECO Plus Warranty. The former on-road warranty zone has been extended considerably and now spans all countries from the Atlantic all the way to the Ural mountains.

This means that for a vehicle with ECO Plus axle and air suspension the national differentiation by individual countries will no longer apply. The only distinction now is purely by use on paved (on-road) and unpaved (off-road) roads within Europe.

On-road refers to a road with a sealed, hard surface, i.e. a tarmac or concrete road surface. Compacted crushed rock roads are designated off-road. Off-road use includes cases where the vehicle leaves the hard surface for short periods for operational purposes.

You must still observe BPW's recommendations for use and the instructions on maintenance.

In addition, BPW offers customers with off-road vehicles (e.g. tippers) which are used exclusively in on-road operation the opportunity of obtaining the 5 year ECO Plus Warranty instead of 3 years; in combination with our BPW ECO Tronic EBS we will provide the 5 year ECO Plus Warranty on the BPW chassis without any mileage restrictions.

The new warranty conditions will apply with the introduction of the optimised air suspension technology from the 1st July 2010.
