

THE

NEW

STANDARD

BPW ECO AIR COMPACT: FASTER, SIMPLER, LIGHTER

-60%

Lower weight of the fibreglass reinforced plastic composite air tank compared with steel – for more loading capacity

-50%

Reduced number of components – for a robust design and long life expectancy

-30%

Fewer module versions – for more versatility

New modular ECO Air COMPACT air suspension plus new, light ECO Air composite air tanks – joined in an optimally coordinated system: that is the new standard for 9 tonne axles in on-road use. Every detail contains 100% BPW quality, cutting edge running gear know-how and a host of advantages. This is because innovative developments have rendered the system quicker, simpler and lighter in many areas. Whether in the trailer assembly, on the road or later when it comes to maintenance: ECO Air COMPACT is guaranteed to provide more cost-effectiveness every time and everywhere.

-50%

Less expenditure of resources due
to redesigned axle lift –
for shorter assembly time

100%

Maintenance-free spring seat arrangement
- for reduced operating costs

COST-EFFECTIVENESS IN EVERY DETAIL

The new ECO Air COMPACT was designed for leaner production processes at the vehicle manufacturer. The trailer assembly has thus been optimised even more: fewer versions and reduced assembly costs save time, effort and also costs. And freight forwarders also benefit too: as the system, including the ECO Air composite air tank, is completely maintenance-free and components can be replaced in a modular manner. This is ensured by innovative details such as diagonal screwed joints or the special steel-rubber-bush for long life expectancy – which therefore ensures that the trailer is continuously and economically in use.

NEW MODULAR CONCEPT

The ECO Air COMPACT suspension is mounted on a two-part cast member and the new steel-rubber-bush. With fewer components this innovative technology makes the ECO Air COMPACT particularly robust. This is because the optimum transfer of forces is ensured by the diagonal screwed joints combined with the four points of support. An additional advantage is that the individual components are not welded and can therefore be easily replaced.

Your advantages at a glance

- 30% fewer module versions for more flexibility
- 50% reduced assembly time through re-designed axle lift
- 50% lower number of components for a robust design and long life expectancy
- 100% maintenance-free spring seat arrangement reduces operating costs
- 60% lighter fibreglass reinforced plastic composite air tanks for more loading capacity

NEW STEEL-RUBBER-BUSH

The specially designed steel-rubber-bush is asymmetrical, can handle all demands placed on it and is designed without any recesses. Its optimised axial and vertical track guidance helps contribute towards high operating comfort and lower tyre wear. Consistent load absorption as well as even deformation ensure smooth operating and long life expectancy.

NEW ECO AIR COMPOSITE AIR TANK

The new ECO Air fibreglass reinforced plastic composite air tanks offer a reduction in weight of up to 60% in comparison with steel compressed air tanks (at 2 x 60 litres). The high-tech composite materials, together with the patented production process, ensure long life expectancy.

NEW DOUBLE-SIDED AXLE LIFT

A pre-mounted unit with counter-holder is secured to a support or cast member in a few simple assembly moves. That reduces the assembly costs by 50% when compared with air suspensions.

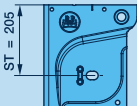

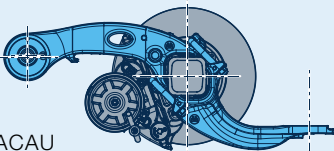

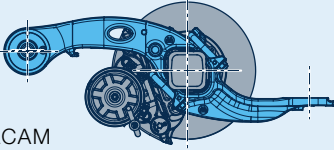

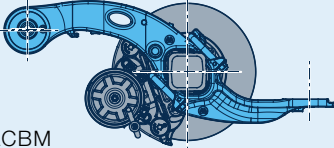

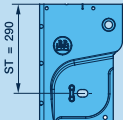

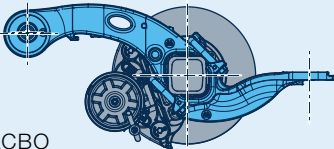

ECO PLUS GUARANTEE

5+3 years with unlimited mileage –
for safety throughout Europe

FEWER COMPONENTS EQUALS HIGHER COST-EFFECTIVENESS

ECO Air COMPACT is designed for on-road use with 9 tonne axles – suitable for drum and disc brakes. Nothing else is needed: the modular product construction kit only now contains 2 supports, 2 suspension arms and 3 bellows brackets. Fewer components reduces the lay-out complexity - and helps to lower storage and production costs.

| Suspension ECO Air COMPACT (AC) | | | |
|---------------------------------|---|---|---|
| Empty without air | Connecting pieces | Versions | Bellows |
| 145 – 175 |  |  ACAU |   |
| 185 – 215 | |  ACAM | |
| 240 | |  ACBM | |

WE FOLLOW THE ECONOMICAL ROUTE!

BPW is a globally leading manufacturer of intelligent running gear systems for drawbar trailers and semi-trailers. From the axle via the suspension and brake to the electronic braking system and telematics, we can provide you with complete one-stop trailer running gear supplies. As an owner-managed company, BPW is consistently focused on one goal: to always offer you precisely the solution which pays off for you in the end. In line with this, we focus on total quality to ensure high reliability and life expectancy, weight- and time-saving designs ensuring lower operating and maintenance costs as well as personalised customer service and a tight-knit service network to provide quick and direct support. Rest assured that with BPW you will always follow the most cost-effective route!
