Only until  
31.12.2019

CONNECTION TO  
OTHER TELEMATICS  
SYSTEMS POSSIBLE

BrakePadMonitor + brake linings

**699 €\***

The BrakePadMonitor consists of a sensor mounted in the brake calliper which measures the data of the brake pad, brake lining and disc wear, as well as the functionality of the brake to a control unit. The data is then displayed on the cargofleet telematics platform and in the driver app for you to view at any time, wherever you are. This allows you to plan maintenance intervals in an optimal way, avoid down time and reduce your operational costs. The system is platform-independent and also works with other telematics systems.

# ... YOU CAN'T REFUSE.

BrakePadMonitor +  
TC Trailer Gateway BASIC + brake linings

**999 €\***

**ORDER  
TODAY!**

Only until  
31.12.2019

TC Trailer Gateway BASIC is the affordable way to get started with telematics. The flexible, modular system can be individually adapted to your requirements and provides a wealth of information. By adding different hubs, you can transmit a variety of data such as position, temperature, tyre pressure or – in combination with the BrakePadMonitor – brake lining wear.
