During the course of continuous development and product optimisation, the blue sealing cap of the resetter (03.211.10.11.0) on the ECO Disc TS2 brake is being equipped with an additional O-ring.

The new O-ring significantly increases the sealing efficiency of the resetter and therefore better protects the resetter (hexagon SW 13), as well as the internal components of the brake, from environmental influences.

From now on, all TS2 repair kits, which include the sealing cap, will be successively extended to include the O-ring.

In addition to the extension of the known repair kits, the new O-ring is available in combination with the sealing cap, assembly grease and installation instructions under item number **05.801.47.87.0**.
