## Successive conversion of BPW brake drums

BPW is successively converting its brake drums for brakes SN 4218 and SN 4220 to an optimised brake drum hub centring device. For this purpose, a larger chamfer has been created on the brake drum in the area around the centring device.

Please note that once the BPW stocks have been depleted, the item numbers will be successively converted in the ordering process automatically. The new BPW brake drum variants are fully downward compatible.

The brake drums being replaced can be used up for current series variants. However, they must not be installed with Generation 10 - 12 t ECO Plus 3 hubs/axles (start of series production 01.07.2022).
