

## TSB 3709 / 120 Offset ECO Disc with Brake Pad Wear Sensing

In the transport sector for Mega trailers and high-cube units, the disc brake version TSB 3709 with offset 120 and wheel rims 19.5 x 13.00 respectively 19.5 x 14.00 is used for super single tyres.

With this unusual design and due to variations in the wheel inner diameter it can occur with some wheel manufacturers that the heat protection plate on the wear sensor assembly can rub on the wheel rim.

Therefore in the combination of TSB 3709 with ET 120 and the wheels 19.5 x 13.00 and 19.5 x 14.00 respectively, it is essential that the diameter of the wheel in the rim well area is a minimum of 418 mm.
