

Modification to the tightening torques of the air bag central bolted connection.

Within the framework of further development, the tightening torque of the central bolt connection of the BPW 30/30K air bag with Airlight II air suspension is being increased from 230 Nm to 300 Nm for the offset dimension $V=20\text{mm}$.

This measure means that we are achieving standardisation with our new ECO Air COMPACT suspension which has been available on the market since July 2012.

Additionally during standardisation, the tightening torque for the BPW30/30K and BPW 36/36k/36-1 air bags that are also interfaced with a steel plate with offset dimensions similar to the ECO Air COMPACT, are also being raised from 230 Nm to 300 Nm.
