2023-07-07

The trailer of the future uses sensors to recognize the condition of all relevant running gear components, predicts their wear and suggests maintenance appointments at the optimum time. In the future, rigid maintenance intervals or mileage will not be the sole deciding factor in the maintenance of the trailer chassis, but also sensors and intelligent algorithms.

### **Market launch of level 1 of the BPW running gear generation iC Plus - Equipment of disc-braked running gears with brake pad wear sensing:**

The BPW running gear generation iC Plus consists of the BPW 9 t running gear with disc brakes, the sensors for brake lining wear and the idem telematics Gateway Basic. The iC Plus cable spyder completes the scope of delivery to connect the brake pad wear sensor to the trailer EBS.

With the BPW iC Plus running gear generation, you can take advantage of the all-round carefree package for your trailer: In addition to the vehicle load and the axle load display, you can also see the brake performance of your vehicle. The maintenance calendar and digital maintenance management complete the BPW iC Plus running gear.

#### Available running gear variants:

BPW iC Plus is available for all 9 t air suspension modules (ALII or ECO Air) with disc brakes. From Q4 / 2023, BPW iC Plus will also be available for drum brake running gears in the 9 t segment.

#### Good to know:

Vehicle manufacturers only have to purchase the service app once when commissioning the TC Trailer Gateway Basic iC Plus from idem telematics for the first time.

#### More information:

The BPW microsite for iC Plus is already online. Here you will also find a lot of information:
