

Series introduction of the new BPW 6404 brake lining type in the BPW drum brake from August 2024.

75372301e
2023-09-11

From August 2024, BPW will be introducing a new additional brake lining type BPW 6404 in the BPW drum brake.

The start will be in August 2024 with brake size SN 4218.

The inclusion of another supplier reduces the risk of a supply bottleneck and significantly increases the security of supply for our customers.

The brake lining type BPW 6404 was developed exclusively for the requirements in BPW drum brakes and has successfully passed all tests regarding performance, noise, strength and wear on the test bench and in road tests.

For the successful introduction in August 2024, the adaptation of existing vehicle type approvals (homologations) is necessary.

Please ensure that your system and vehicle type approvals are adjusted accordingly by this date.

The test report 36108212 is available on the BPW website under Service/ Downloads/ Expert reports/ Brake reports for the amendment of existing approvals.

After the introduction of the new lining type BPW 6404 for brake size SN 4218, other brake sizes will follow.

We will provide you with the necessary information in good time and inform you about the next steps.

You can also obtain detailed information from your BPW contact person.
