2023-11-10

Since August 2023, the **AxleGuide**, the new interactive design manual of BPW with catalogue function for the commercial vehicle running gear range, has been online on the BPW website - in German, English and French. The document integrates the most important technical information, previously only available separately, as well as installation instructions, explains functional relationships using newly created overviews and contains links to data sheets, test protocols and further information.

The AxleGuide is primarily aimed at vehicle manufacturers and their employees in development, design, production, purchasing and sales and is suitable as a reference work and for self-study, but especially as a training document. Vehicle operators or workshops, as well as those involved in training or further education, can also benefit from it.

Further documents can still be found at www.bpw.de. Warranty documents, maintenance and workshop manuals or spare parts documentation, for example, also remain there and are therefore not included in the AxleGuide. These should be consulted for further information such as safety instructions and tightening torques for maintenance or repair.

The recommendations described in the AxleGuide reflect the many years of experience of BPW application engineering. In special cases, please contact your BPW contact person.
