

January 2024

Extension of the BPW running gear generation iC Plus & Tire pressure monitoring according to UN ECE R 141

75472401e
2024-01-11

Our new intelligent BPW iC Plus running gear generation is now also available with drum brakes: the 9 t running gear can be combined with the SN 4218 drum brake version.

Product details:

The iC Plus includes brake pad wear sensors as well as the idem Telematics Gateway Basic. The iC Plus cable spider is included in the delivery to connect the brake pad wear sensor with the trailer EBS. Furthermore, the iC Plus axle generation features a Brake Performance Monitor, which provides information on the vehicle's braking behavior, as well as an axle load indicator for more efficient utilization of the vehicle and a tire pressure monitoring system or tire pressure control system. A digital maintenance calendar that reminds of upcoming maintenance appointments, shows vehicle histories and includes the maintenance regulations for the 9 t running gear from BPW, completes the scope of delivery.

Benefit from the advantages of the new iC Plus running gear generation with all BPW 9 t air suspension modules (ALII or ECO Air) with disc and drum brakes.

Are you prepared for the new legal tire pressure monitoring in trailers according to UN ECE R 141 from July 2024?

The BPW Group offers you two solutions that meet the legal requirement, the idem TPMS (Tire Pressure Monitoring System) and BPW AirSave (Tire Pressure Control System). Both can also be combined with the new iC Plus chassis generation.

Information on legislation and BPW solutions can be found at: [Tire pressure systems \(bpw.de\)](#)
