

Introduction of the BPW Reman Line with remanufactured ECO Disc TSB brake calipers in the Aftermarket

From April 2024, BPW will be introducing the new BPW Reman Line in the aftermarket.

It will be launched with remanufactured ECO Disc brake calipers of the TSB 3709 and TSB 4309 versions.

In addition to the new OES product, BPW is thus offering customers an economical alternative for the repair of older vehicles that is in keeping with the current market value.

The advantages for the customer:

Unlike various third-party suppliers, the BPW Reman Line ECO Disc brake calipers are assembled on the production line of the original equipment brake calipers and are 100% end-of-line tested.

Only BPW can also ensure that the safety-relevant internal components of the adjustment unit are also replaced with new original parts and therefore meet the high BPW quality requirements.

Further information on the product benefits can also be found in our current flyer „Makes everything else look old - ECO Disc brake caliper from BPW Reman Line“.

The following brake caliper versions are available:

| Brake caliper / Core-Group* | BPW Item number on the OE caliper (Old product) | BPW Item number on the reman caliper | BPW Order number reman caliper | Sell-back option (plus sales tax) |
