

## NEW: BPW AirSave for low loader trailer steering axles

75602401e  
2024-04-01

AirSave - the BPW tyre pressure control system is now also available for the steered and self-steering axles of low-loader vehicles.

The product portfolio covers all 9 to 12 t steering axles (N...L/N...LL axles) with SN 3020 drum brakes, twin tyres and AL II air suspension.

The low loader trailer steering axles are supplied ex works in the „RV“ version („hosed“) with pre-assembled air pipe and AirSave hub cap.

Preparation for AirSave and use with AirSave do not impair the function of the steering axle.

The UN ECE regulation R 141 prescribes that tyre pressure monitoring will be mandatory for all newly registered trailers from July 2024.

The same delivery times apply to steering axles with AirSave preparation as for normal steering axles.

The remainder of the AirSave scope of delivery, such as the AirSave base system and axle line kit, remains unaffected and must be ordered separately. Further information about BPW AirSave - BPW tyre pressure control system can be found on our [Homepage](#).

If you have any questions, please get in touch with your BPW contact person.
