BPW AirSave

# **OPTIMAL PRESSURE FOR MAXIMUM SAVINGS.**

# Maximum cost-effectiveness and greater safety thanks to optimal tyre pressure.

BPW's AirSave allows you to continuously track and control your tyre pressure while driving.

The tyre pressure is constantly monitored and automatically adjusted to the desired level via a control box with booster. Should the pressure deviate considerably from the norm, for example in the event of tyre damage, a warning light informs the driver to this effect so that they can promptly drive to a service station instead of having to stop on the side of the motorway. This significantly reduces the risk of accidents, prevents downtimes, saves fuel by maintaining optimal pressure at all times, and reduces CO<sub>2</sub> emissions.

\*As a result of fuel and tyre savings based on a 3-axle trailer (assuming mileage of 120,000 km/year and an average pressure deviation of 10%)

Reduced operating expenses  
due to ideal tyre pressure

---

Increased safety by preventing  
tyre blow-outs

---

Requires little maintenance

---

Optimally planned  
visits to the service station

---

## Optional accessories

Name	BPW material	Name	BPW material
Telematic-Kit AirSave	02.1819.01.10	Superseal-Kit for AirSave	92.0000.1685
Extension cable for AirSave basic kit	92.0000.0024	Grommet for superseal kit	92.0000.1687

## Telematics Connection in the Telematics Portal and the DriverApp

In order to offer even more comfort and safety for driver, freight and vehicle, the connection of AirSave to telematics will be possible. The signal triggered by AirSave in the event of a flat tyre is transmitted in parallel to the external lamp and the telematics system. The driver or fleet management receives the current status of the AirSave system in real time. This is conveniently displayed in the all-in-one platform cargofleet 3 or the DriverApp from idem telematics. Further information and personal advice on all aspects of telematics can be found at: [www.idemtelematics.de](http://www.idemtelematics.de)
