

## ECO Plus 3 series launch

On 1<sup>st</sup> of October 2015 the next step in the series launch of the 9t-ECO Plus 3 bearing technology will occur.

In this step, the wheel end 22.5" with offset 0 and 10/ 335 wheel stud connection for disc brake ECO Disc and drum brake ECO Drum will be launched.

Additionally to the known advantages, the ECO Plus bearing technology has been improved in reliability and serviceability.

BPW will also use the introduction of the new ECO Plus bearing technology in order to standardize the designs of the booster bracket and the brake camshaft in the drum brake.

The product portfolio of the drum brake is then considerably streamlined and adapted to the today's individual and efficient customer processes.

Detailed information on concrete steps can be found in the BPW News „ECO Plus 3 series launch“ from the 22<sup>nd</sup> of June 2015.

The unification of the brake camshaft and the booster brackets versions is only executed with 9t ECO Plus rigid axles with drum brakes. Other tonnage or versions (steering axles, stub axles, swing axles) are not affected.

For spare parts requirements the known brake camshafts and booster brackets are still available.

### Next Step:

On 1<sup>st</sup> of March 2016, the final step of the ECO Plus 3 series launch is carried out with the conversion of the two wheel ends 19.5" with wheel connection 8/275 and 17.5" with wheel connection 10/225.

Your BPW contact person can provide you with further information.
