New air bags 30 and 30K with central bolt connection

Series production and the successive market launch of the new 30 and 30K air bags with central bolt connection will start in August 2019. The existing air bags will be completely replaced.

The further development of the air bags saves 1 kg weight per air bag in future, i.e. 2 kg per air suspension module.

In future, the bell and rubber bellows will be permanently connected to each other, eliminating the need to replace individual components.

Spare parts will continue to be available for all BPW air bags currently in the market.

The mounting interfaces to the vehicle chassis and to the trailing arm (Airlight II air suspension) or to the air bag carrier (ECO Air COMPACT / ECO Air air suspension) remain the same.

The technical performance is identical.

A mixed installation of the previous and the new type is possible.

Previous part numbers	New part numbers	Start of the changeover
05.429.43.85.0	05.429.43.90.0	September 2019
05.429.43.86.0	05.429.43.91.0	September 2019
05.429.43.89.0	05.429.43.96.0	August 2019
