

ECO Air COMPACT HD

now available

New air suspension series for standard off-road use (9 t) with proven BPW quality and 5 + 3 years ECO Plus warranty

After the successful presentation at the IAA 2016, the launch of the new EAC HD air suspension series starts in November.

The innovative ECO Air COMPACT running gear has already successfully proven its worth over many years in 9 t on-road applications. The modular system in combination with the dependable BPW quality has been employed hundreds of thousands of times to date.

The use of state-of-the-art manufacturing processes now enables the EAC running gears' area of use to be extended to more demanding applications - standard-offroad-use (9 t). Until now, customers performing both on-road and off-road tasks needed reinforced, clamped SL and AL II series air suspension systems – in future, EAC HD can be used in these applications. The well-known specifications of the EAC kit are also to be considered for the program expansion.

The new EAC HD air suspension also has new optical characteristics: an HD shock absorber with a silver plastic cap is supplied as standard and is optimally adapted to the tougher requirements with its characteristics. In addition, EAC HD logos are placed in the cast trailing arm as well as the EAC HD logo on the hub cap.

EAC HD can be ordered from week 48.
