

Forged aluminum trailer hub for lightweight-trailer

From end of March 2017, the forged aluminum trailer hub will be available. The forged trailer aluminum hub in Europe has been specially designed for the tank and silo vehicles as well as light-weight trailers.

Your benefits are:

- More payload through the weight reduction of 18 kg per axle, 54 kg per 3-axle unit. For example, this weight reduction of 54 kg corresponds to a more payload of approximately 64 liters of heating oil per load. With an increase in payload of 54 kg, an extra revenue of up to EUR 540 per year can be achieved.
- Environmentally friendly due to lower CO₂ emissions, since few journeys are necessary. There will be less energy consumption for the same quantity of goods transported.
- High-strength forged aluminum hub
- Optimum corrosion protection through KTL_{Zn}-coating
- For 9 t axle load with 0 mm wheel offset and with disc brake TSB 3709 or TSB 4309, for wheel connection 335x10
- Can be combined with the AL-suspension
- With Europe-wide 5+3 years ECO Plus warranty for air-suspended BPW running gear systems and 3 years' warranty for a brake cylinder, shock absorber and air bag in On-Road and standard Off-Road use
- With aluminum hub cap

-18 kg per axle

Existing axles can be equipped with the new aluminum hubs as required. The aluminium hub is suitable for additional paint.
